Seawork have a range of Containerised Dive Controls. We currently have four, Stand-alone containerised dive controls, two being 10-foot units and 2 being 8-foot units.

These units (Con 08 and 09) are the smallest, lightest, & most compact however they are, none the less, very capable & meet the requirements for inland Inshore Diving Operations.

The system is housed in an 8-foot ISO Container, heated, primary and emergency lighting and equipped with penetrator plates for connection of air supplies and power.

Audited to IMCA DO23 with full certification packages and equipped with First Aid kit, and an oxygen therapy kit.

Containerised Dive Control – Con 08 & 09

A complete surface demand dive system, fully integrated, with ample storage and stand-by diver seat, with 20 metre interconnecting deck hoses and power supply. One lift, ready to, go and provides security and a safe operating environment rather than the norm of loose kit rolling about in the back of a van or scattered about unprotected out on the deck of a vessel.
